### **Product description**

Helsdon Hammock is a lay flat hammock tent with a unique construction that adjusts to the shape of the human body to provide maximum sleep comfort. You can sleep on your back, side or even stomach. Spreader bars and a double layer bottom with room for any sleeping pad prevents the hammock from folding up around your body. Helsdon Hammock only takes two minutes to set up and there is plenty of room for storage inside the hammock. The ventilated tent has an integrated bug net. By using any insulating sleeping pad you don't need an expensive under quilt during cold nights. During warm nights, you can open up the bug netted sides and windows. Helsdon Hammock will keep you safe, dry, warm and cool in all weathers and winds and regardless of roots, rocks, moisture or animals and you will wake up well rested for another adventurous day in the outdoors.

### **About Helsdon Outdoors**

Helsdon Outdoors was founded by Canadian nature guide Dave Helsdon. Dave invented and has developed the unique Helsdon Hammock tent for more than 25 years. Our goal is to help everyone enjoy nature in all it's wild and wonderful beauty. We can't stop the rain to fall on you. Neither can we stop the freezing wind or exhausting heat or make your camping ground flat. But we can provide you with a shelter that will keep you dry, warm, cool, comfortable and safe in all conditions.
